CodeJumpstart

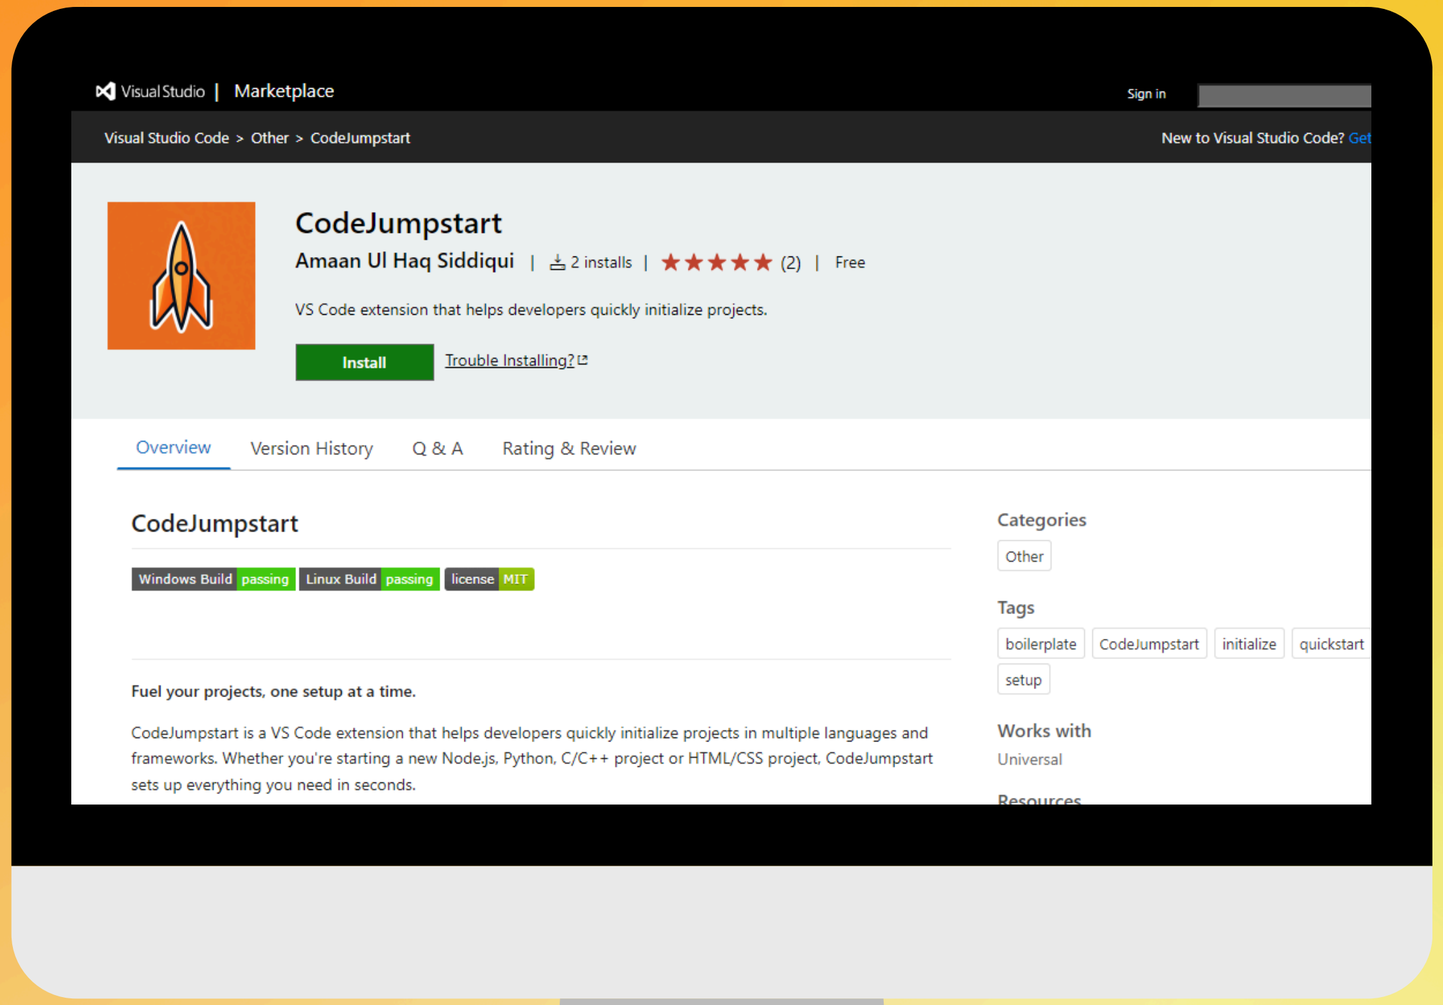
An Open-Source VS Code Extension

Amaan Ul Haq Siddiqui

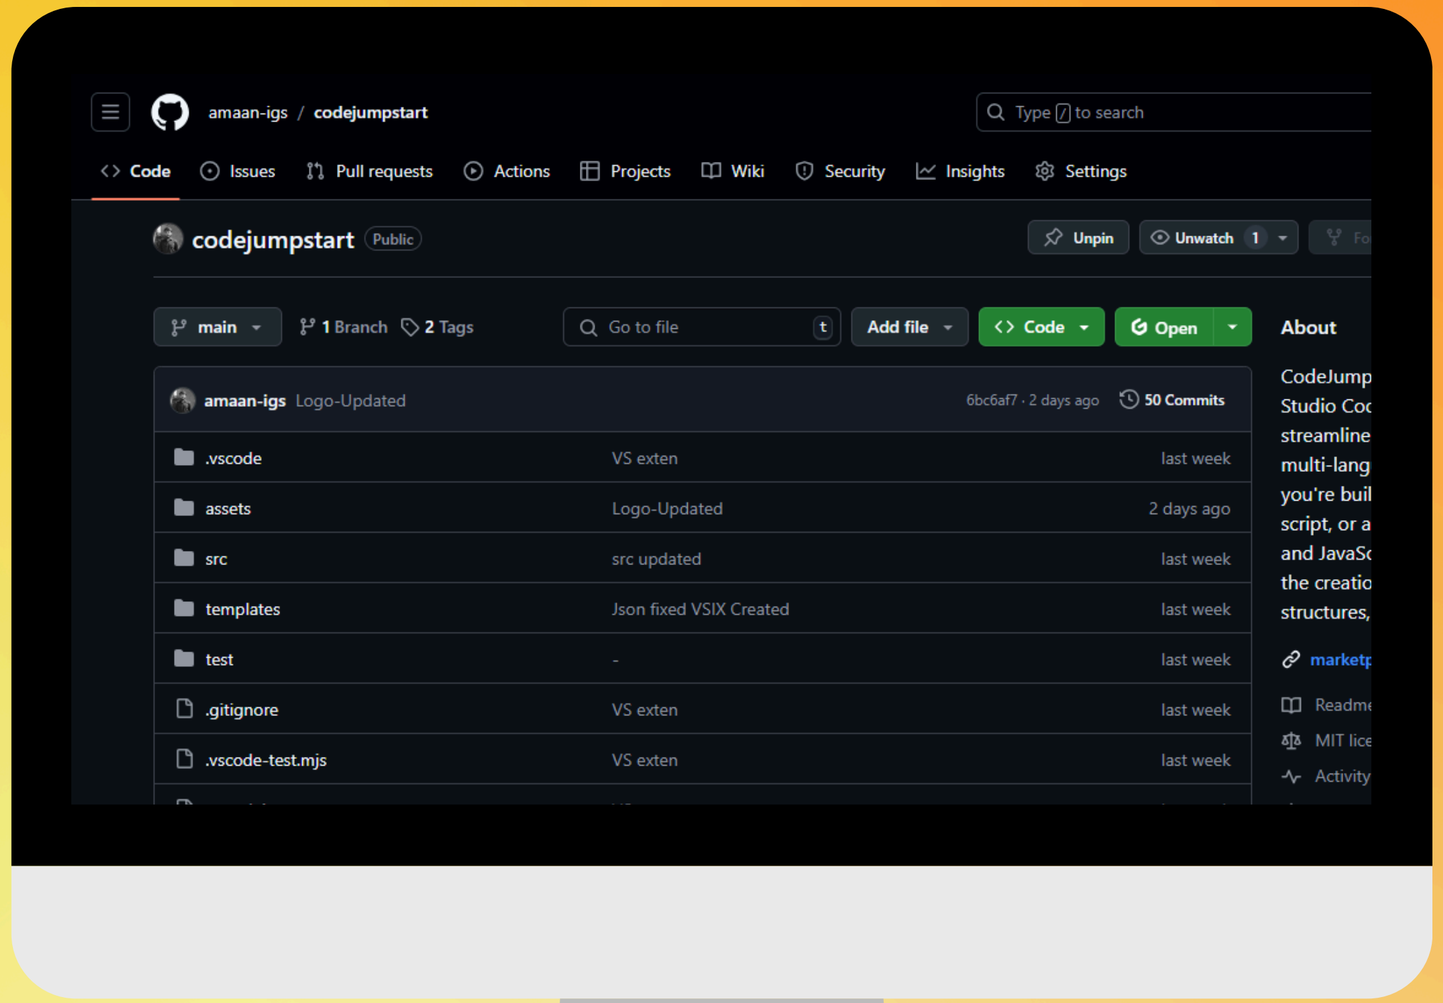
Overview

CodeJumpstart is a VS Code extension that automates project setup across multiple languages. It supports C/C++, VueJS, and HTML/CSS/JS, saving time by automating the creation of project structures and configurations. As an open-source tool, it's easy to contribute to and can be extended to support additional frameworks like Spring Boot, Node Express, and Django.

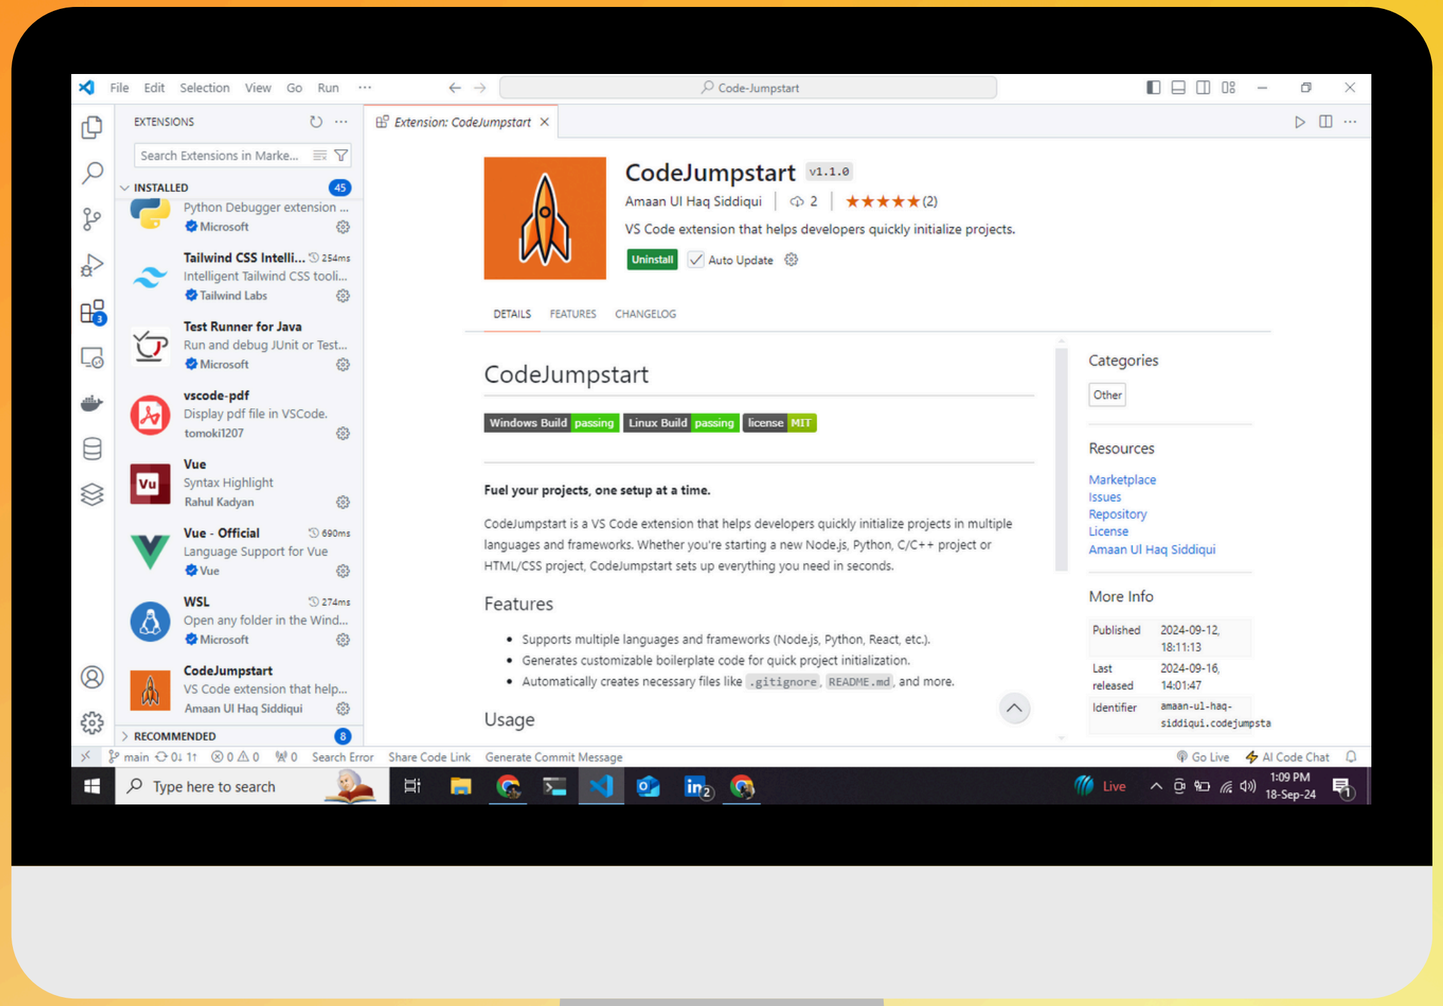
Marketplace Overview



Github Repository



Install from VS Code



Open to Contributions & Future Plans

CodeJumpstart is fully open-source under the MIT License, inviting the community to contribute by adding boilerplates for frameworks like **Spring Boot**, **Node Express**,and **Python Django**. Future plans include customizable templates based on user preferences and enhancing the user experience for more intuitive project setups.

Thank You

We invite you to explore CodeJumpstart, an open-source project designed to streamline your development workflow. Whether you're looking to jumpstart your own projects or contribute new features and boilerplates, your participation is welcome! Let’s build something great together.
